Subject: Final Report 561621-EPP-1-2015-1-IT-EPPKA2-CBHE-JP

In the name of European Society of Physical and Rehabilitation Medicine (ESPRM), as a partner of TechReh Project, we can underline how much this Project produced so relevant new initiatives in Uzbekistan in relation with Technology in Rehabilitation, upgrading and modernizing many fields in favour of patients: creating new advanced standards in education for professionals and creating new advanced methodologies in evaluation and treatment for persons with disability. For example some colleagues, working in the Tashkent Pediatric Medical Institute, started to cooperate at European Level with Rehabilitation study groups and research community to exchange experiences together with our members to continue the development.

Finally, ESPRM supports the Observations on the Final Report 561621.

After all, ESPRM wishes to express, on the basis of the very positive work done within TechReh project and on the basis of the strong cooperation in Medical Bioengineering created between Uzbekistan Universities and Sannio University in Italy, how could be relevant to proceed to create the minimal conditions to support Uzbekistan Government to develop an educational course for Doctors to become PRM Specialists as in other Countries in Europe. This goal was not in the TechReh Project but during TechReh activities we have found so many interests and competences in local Universities and Health structures to be able to upgrade their capacity to face people needs and expectations in Rehabilitation field. A second step for TechReh could be really very important for Uzbekistan.
